

2" MicroPro Sienna Treated for Ground Contact

What is MicroPro Sienna TOUGH?

MicroPro Sienna TOUGH is treated to a higher level of preservative protection, but with the same colour and all the environmental advantages of MicroPro Sienna.

The difference you'll recognize on 2" Sienna treated to GROUND CONTACT (in addition to the end tag) are fine incisions on the surface of the wood that allow for better preservative penetration. Incising also helps to reduce surface splitting by decreasing the surface tension.

Where to use MicroPro Sienna TOUGH?

Tougher protection is needed when using treated wood in situations that simulate ground contact conditions:

- Decks built close to the ground (less than 6" or 150 mm)
- Decks enclosed with solid skirting that prevents air circulation
- Raised garden beds
- Freshwater docks

What's available?

MicroPro Sienna TOUGH is currently only available at a limited number of retailers. Please speak to your MicroPro Sienna retailer for more information.

2X 10X 16 MPS TOUGH
GROUND CONTACT

This wood has been treated with a registered wood preservative – MicroPro® Micronized Copper Azole

- Never burn treated wood • Wear dust mask & goggles when cutting or sanding wood
- Wear gloves when working with wood
